

Migrating to Fpweb.net Hosted Services

Fpweb.net's SharePoint Engineering team would be happy to assist you in migrating data and users to your new dedicated hosted SharePoint environment.

It's important to know your options when migrating your SharePoint environment.

For more information, please call the Sales Department at **(866)780-4678**.

Available Data Sources

Fpweb.net can migrate or upgrade your data from the following sources:

- An on-premise SharePoint farm
- Another hosting company**

*** A content database backup is required. An STSADM backup may also be used as long as the exact source SharePoint version number is known.*

Migrations from other sources such as BPOS\Office 365 are possible, but would require a third party to perform the migration.

Types of Migrations

Fpweb.net will only migrate content databases and users. Content database backups are restored and attached to the new environment. Users are either extracted from the database or imported from a CSV file using custom scripting. Upgrades from SharePoint 2007 to SharePoint 2010 are possible during the migration process. A one-time migration fee may apply.

Additional Services

Heavily customized source SharePoint environments which include custom code or third party add-on require a third party consulting engagement. Migration of data from systems other than SharePoint 2007 or later will also require assistance from an outside party.
